Program Co-ordinator
Industry/Academic Alliance

Director
Training and Development
Allsoft Solutions and Services

Business Partner **IBM**

BIG DATA - ANALYTICS | IoT | ORACLE | J2EE | PHP | CLOUD COMPUTING

❖ Introduction

In this summer training I have choose course name Php With Laravel which is offered by Allsoft and Ibm. Topic covered in this course Html, Css, Javascript, Bootstrap, php and Laravel which is delivered by Aman Saini(mentor).

❖ Technology Learnt

I have learnt to make website by using Html Css, Bootstrap, Javascript php and Laravel.

Learnt to manage Database entry through website

or Manually by using phpMyAdmin.

❖ Reason for choosing this technology.

I have choose this course php with Laravel for developing website with more functionality and attractive appearance. So as to looking website more professional.

❖ Profile of the Problem

How to make website according to our needs. for different different purpose we need different types of functionality in our website for social media ,education for official work and for retailing site etc.

❖ Existing System

 The main types of social networking service are those that contain category place (such as former school year

classmate),means to connect with friend (usually with self description pages), and a recommendation system linked to trust

Popular method now combine many-of-facebook,youtube,Instagram.

❖ Problem Analysis

● Product definition

Social Network is a simple website designed with core and php of course with the aid of the HTML, CSS, and core javascript. Firstly, users need to register and then log in to the system. Creation of post with the possibility of stamping a picture along with it. Sending and receiving friend requests as well as accepting or ignoring them. Viewing profiles and your relationship with them. Changing the profile picture. Continuously, it consists of two main component user side and admin. Initially created accounts have a default profile picture based on their gender.

Social Network system Home shows all public posts. It doesn't show private posts except if the poster is on your friend list. Posts are displayed in chronological order from latest to oldest. The home also shows your own posts. Different users may suffer layout inconsistency or rather not the required smooth interface if the specified font isn't installed on the user's device (to be solved)

❖ Software Requirement   Analysis

- Notepad, Notepad++

- Wampserver64

- Browser

❖ Design

  - Log out

❖ Implementation

- *Entities*, classes capturing concepts such as users, communities, application models, etc.

- *Metadata* describing and extending entities (e.g., a response to a question, a review of an application model, etc.).

- *Relationships* connecting two entities (e.g., user A is a friend of user B, user C is a contributor to an application model, etc.)

❖ Learning Outcome from training/ technology learnt

I have learnt so many thing from this training like Making form ,buttons ,image,video upload ,creating Links. For decorating pages I have learnt internal and external css. For giving screen adjustable looks I have learnt bootstrap, javascript for database maintains I have learnt php Laravel. this all things help me to learn about web developer well .and know about so many tags which give atttractive looks to my website with proper functionality.

❖   Gantt chart (Describing a timeline of how did you act in six weeks of training?)

❖   Project Legacy

•   Technical and Managerial lessons learnt.

In this project I have learn .how social media work

How code is write for different different functionality

How database work and run according to code .
